Important point: This DB must have one Master Admin that will manage all users there must manage all rules of users.

The website needs a Donation system with a payment gateway,

The DB must have an option to export and import the Data,

In addition, the admin must be able to share the specific data with donors online.

This DB must be secure and hosted with a firewall

In addition, must have a backup to take backup only for new data,

All DB must backup in local storage like USB or HDD and online backup google drobox .

The backup must be set at nighttime 12:00 PM To 5: 00 PM ,

It must have a maintenance system as per the customer.

Development technology and language required:

A trial period of three months must be with us for the test .

- Larvel 10
- React
- Inertia.js
- Tailwind CSS**Specific Requirements**

Language support (Pashto , English)

Data support

The system shall support multi date format (Hijri Shamsi, Hijri Qamari, Miladi)

Comprehensive search facility : search by name , father name , ID .

User types The system shall be developed in a way to support 2 different user types. User types include; admin and user. The super admin shall have the right to create other users and have the overall access to the system The admin will have the rights to view and access the information of a specific section (donor, orphan, Report, Dashboard , all property). The user will have specific rights based on the permission granted by the admin.

Create user

The system shall allow the s admin to create users. The system shall enable the admin to add information of a specific user while creating the users. The system shall properly validate the inputs entered by the admin

Roles and permissions

The system shall enable the admin to add roles

The system shall allow the admin to add permissions The system shall allow the admin to assign permissions to specific roles

Lock/Unlock user

The system shall allow the admin to lock a specific user account when   needed. The system shall allow the super admin to unlock a specific user account when required.

User Login

The system shall allow users to enter their username, password. The system shall implement proper validation on the data entered by the users. The system shall log in the applicant upon successful attempt and prevent the login otherwise.

Application dashboard

The system shall display a dashboard upon successful login by the user The dashboard shall display the information based on the roles and permissions granted to the user The dashboard shall display the statistics of the information in infographics. The dashboard shall include the information about the completed and pending tasks related to users. The dashboard shall display all issues that require urgent action.

Changes in the system

The system shall log any changes made in the system The log shall include the user who made the changes The log shall also include the date and time of the changes made.

Add/List/Edit/Delete document category

The system shall allow the admin to add the document category

The system shall display all the fields required.

The system shall allow the user to save the document category.

The system shall differentiate between the required and non-required fields. The system shall display the proper instruction for filling up the fields.

The system shall allow the admin to list the document category The system shall allow the admin to edit the document category

The system shall allow the admin to delete the document category in case the category is not used.

Add/List/Edit/Delete document processing fees

The system shall allow the admin to add the document processing fees based on the document type selected.

The system shall display all the fields required.

The system shall allow the user to save the document processing fees.

The system shall differentiate between the required and non-required fields. The system shall display the proper instruction for filling up the fields.

The system shall display proper error messages in case the field is not properly filled.

The system shall implement proper validation on the input fields.

The system shall allow the admin to list the document processing fees.

The system shall allow the admin to edit the document processing fees The system shall allow the admin to delete the document types in case the processing fees is not used.

Add/List/Edit/Delete places of issue of documents

The system shall allow the admin to add the place of issue of documents.

The system shall display all the fields required.

The system shall allow the user to save the place of issue.

The system shall differentiate between the required and non-required fields. The system shall display the proper instruction for filling up the fields.

The system shall display proper error messages in case the field is not properly filled. The system shall implement proper validation on the input fields.

The system shall allow the admin to list the places of issue.

The system shall allow the admin to edit the places of issue

The system shall allow the admin to delete the place of issue in case of not used.

User friendliness

The system shall display selection boxes based on the user's most recent used or most frequently used options The system shall have any other option that helps the user in faster data entry.

Provide alerts

The system shall alert the user of the pending docs The system shall alert the user on any other urgent matters

Attest documents

After proper verifications, the system shall allow user to attest the documents The system shall allow the user to assign hologram to the documents

Provide Search facility

The system shall provide multiple search options to the users. The system shall display all the matching documents based on the search The system shall notify the user when no matching is found on the search

Report generation

The system shall allow the user to generate reports based on multiple options. The system shall allow user to generate timely reports of the documents attested on in progress.

The system shall generate statistical reports of the attested and in progress documents

The system shall generate PDF, Excel, CSV type reports upon user's request

Add No object certificates information

The system shall display all the fields required.

The system shall differentiate between the required and non-required fields. The system shall display the proper instruction for filling up the fields.

The system shall display proper error messages in case the field is not properly filled.

The system shall implement proper validation on the input fields.

The system shall add the information of the place the certificate is received and the place where it is sent.

Add other legal, criminal, prisoners related…etc.

The system shall allow users to add all related information regarding specific legal, criminal and other cases.

The system shall display all the fields required. The system shall differentiate between the required and non-required fields. The system shall display the proper instruction for filling up the fields. The system shall display proper error messages in case the field is not properly filled. The system shall implement proper validation on the input fields. The system shall add the information of the place the case is received and the place where it is sent.

Provide search facility

Retrieving Information: Searching allows users to find specific information or data within an application. This could be anything from searching for a specific

document, file, or record in a document management system, to searching for specific products or services in an e-commerce application.

Navigation:

Searching can help users navigate within an application by quickly finding and accessing relevant sections or features.

Filtering and Sorting:

Searching can be used to filter and sort data within an application based on specific criteria. This can be especially useful in applications that deal with large amounts of data, such as databases or data analytics tools. Users can input search queries to filter data based on specific attributes or criteria, making it easier to find and analyze the required information. Troubleshooting and Debugging: When facing issues or errors in an application, searching can be used to find solutions, documentation, or forums where others have encountered similar problems.

Reporting facility

The system shall enable user to receive the report in pdf/excel/csv files. The system shall enable user to receive statistical report.

The system shall enable user to receive income flow report.

The system shall provide a comprehensive report based on the different criteria.

Add information related identity verification

The system shall allow users to add all related information regarding orphan verifying their identity.

The system shall display proper instruction for filling up the fields.

The system shall display proper error messages in case the field is not properly filled.

The system shall implement proper validation on the input fields.

Performance

The system shall be based on web and has to be run from a web server.

The system shall take initial load time depending on internet connection within an adequate timeframe. The performance shall depend upon hardware components of the applicants.

Data Transfer

The system shall use secure sockets in all transactions that include any confidential applicant information.

The system shall automatically log out all applicants after a period of inactivity. The system shall not leave any cookies on the applicant's computer containing the user's password.

The system shall not leave any cookies on the applicant's computer containing any of the user's confidential information.

Data Storage

The applicant's web browser shall never display a customer's password.

The system's back-end servers shall never display applicant's password.

 The applicant's password may be reset but never shown.

The system's back-end servers shall only be accessible to authenticated administrators.

The system's back-end databases shall be encrypted.

Configuration Management Tool

The source code developed for this system shall be maintained in configuration management tool.
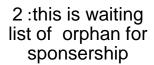

User Interfaces

The user interface for the software shall be compatible to any browser such as Internet Explorer, Mozilla or Netscape Navigator by which user can access to the system.
Hardware Interfaces

Since the application must run over the internet, all the hardware shall require to connect internet will be hardware interface for the system. As for e.g. Modem, WAN – LAN, Ethernet Cross-Cable.

Software Interfaces

The system shall communicate with payment gateway system to identify available payment methods, validate the payments and process payment.
